

If data is the new gold, then every company with a pile of documents is sitting on a gold mine. It's time to get the data out.

Four Key Attributes of a Winning Documents to Data Solution

Our eBook on what's needed for a great solution and how GLYNT can speed your document workflows

Meet GLYNT

Built on an advanced 'Few Shot' machine learning system, **GLYNT is a different way to transform documents into data**. First, train on just a handful of documents (2 – 5). Next, get great performance from the start. GLYNT averages 98% accuracy. Third, GLYNT is DIY so you get production-ready results in minutes. That's why customers in energy, supply chain, healthcare and other markets trust GLYNT to process their documents across the globe.

Document ID	Document Name	Field Label	Returned Value
1	scan_20200624T120028	CustomerName	BLAKE GREEN
2	scan_20200624T120028	AccountNumber	0076 5444 446 6
3	scan_20200624T120028	ServiceAddress_1	123 MAIN STREET

Transform Documents into Data

Our Vision

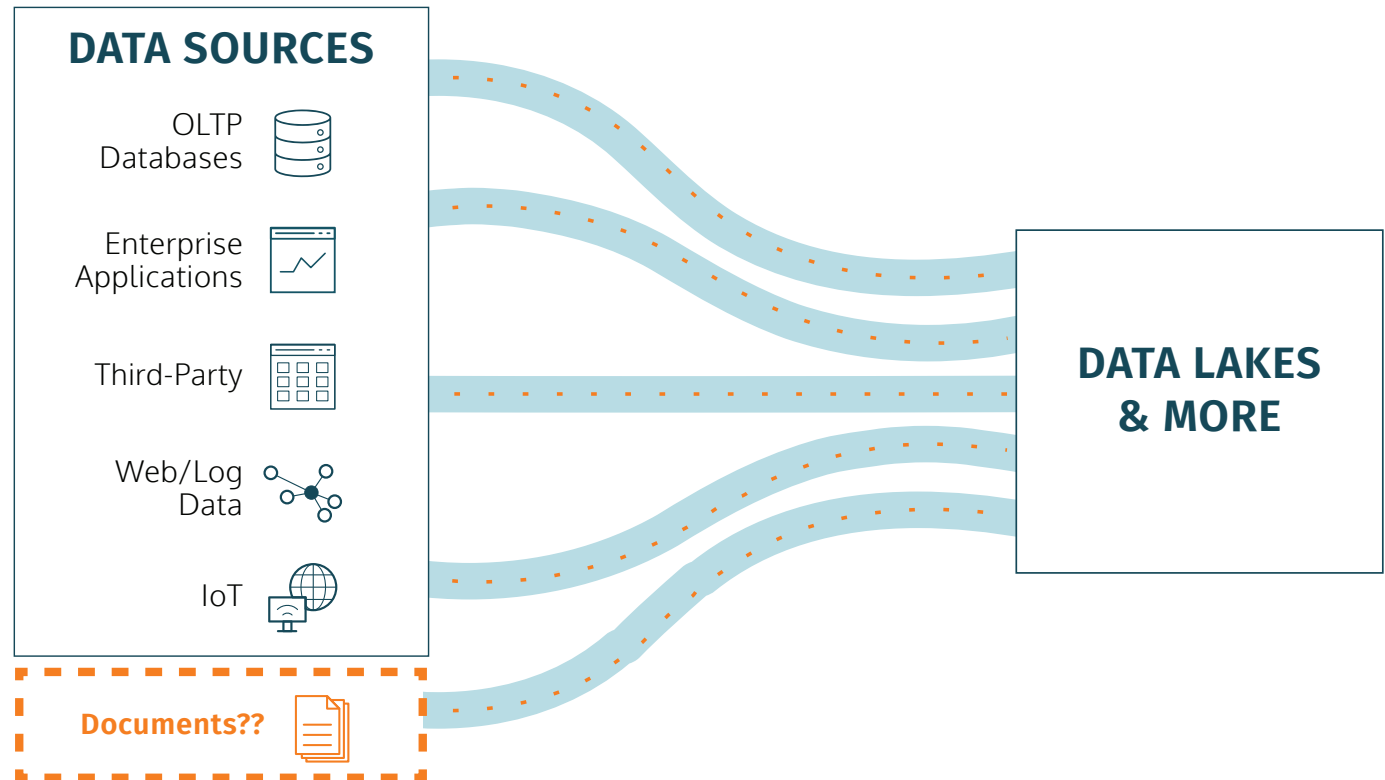

A high performance, highly scalable documents-to-data solution that fits right into existing systems, with a simple no-code UI. Ready for business users in every department.

The Challenge

Here's the problem we set out to solve. Modern software systems ingest data at scale – from all sorts of places. But documents are not part of this scalable data world.

Why? Two persistent frictions:

Deployment and integrations have been too complex. Lower accuracy rates leads to lots of manual rework.

Now, with powerful AI built into no-code software, these frictions are gone.

Four Key Attributes of a Winning Documents to Data Solution

1 Simple to Use

The Citizen User can set up an automated workflow, manage a library of flows, and review the results. No coding needed. Just a few tasks, completed in a few minutes. With world-class AI at your fingertips, anyone can use GLYNT.

2 Stay in Control

The Citizen User has the tools at his or her fingertips to do a great job. The entire workflow can be managed in the GLYNT UI. If a data error is found, correct it instantly and retrain the AI.

The Citizen User

A business analyst, spreadsheet jockey, citizen data scientist, and members of your data team. An employee with knowledge of your use case, data needs and current document flows.

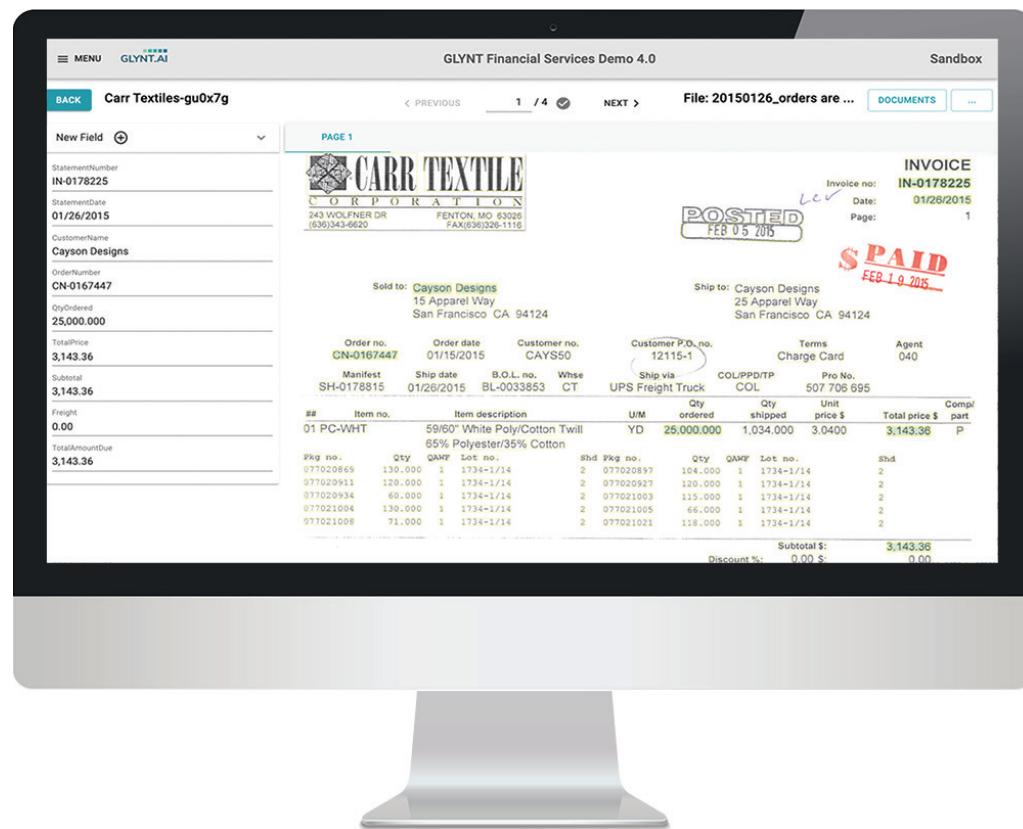

3 Trust the Data

Data documents are used in healthcare, payments, financing and reports to investors. Accuracy matters, and the right solution delivers accurate results, and the reporting that demonstrates verified results.

Data that is Ready to Consume

Putting data from documents into an existing structured database? A great solution includes easy-to-use tools for configuration and customization of your data output. No need for extensive data mapping, exhausting integrations or support tickets. Built-in tools deliver reliable, consumable data.

Complete No-Code User Experience

4 A Scalable Solution

There are two elements to document scalability. Speed and volume can stretch technical resources. But scalability also depends on how the document system handles document variety. Are documents persistently left out? A scalable solution transforms all the documents in your flow.

Semi-automated and manual data entry systems are slow and difficult to manage. Scalable solutions remove the chokepoint to revenue growth. An easy-to-use no-code product lets your team thrive and scale

READY TO TRY GLYNT?

Contact us for a customized demo on your documents! You send us the documents you see every day, and some tricky edge cases. We'll show you how GLYNT tackles the tough challenges. Let's have some fun!
