

# Baseline

Historical performance data and monthly updates for Scope 1 and 2 emissions, energy, water and waste

## The Challenge

With reporting deadlines coming fast, everyone wants to prepare historical baselines and keep them fresh going forward. But it is tough to know where to start as key data is often scattered across siloed business systems.

Making the job even harder is the fact that key sustainability data is not in business databases, but in Primary Data sources (e.g. original PDFs, scans, xls files and more).

## The GLYNT Solution

Get **automated, accurate, granular, audit-ready data** for emissions reporting and energy, water and waste expense management.

With years of experience, GLYNT delivers **first data within two weeks and a full year of audit-ready data within 90 days**, with a regular cadence of data updates after that.

**GLYNT is the all-in-one solution.** Handling all file types and sources, including foreign languages and character sets, GLYNT data can be customized to **seamlessly flow data into your sustainability, carbon accounting or enterprise systems**. Add your own data too – enabling integration with SAP, accounting and other systems.

Get **sustainability data you can rely on** from GLYNT.

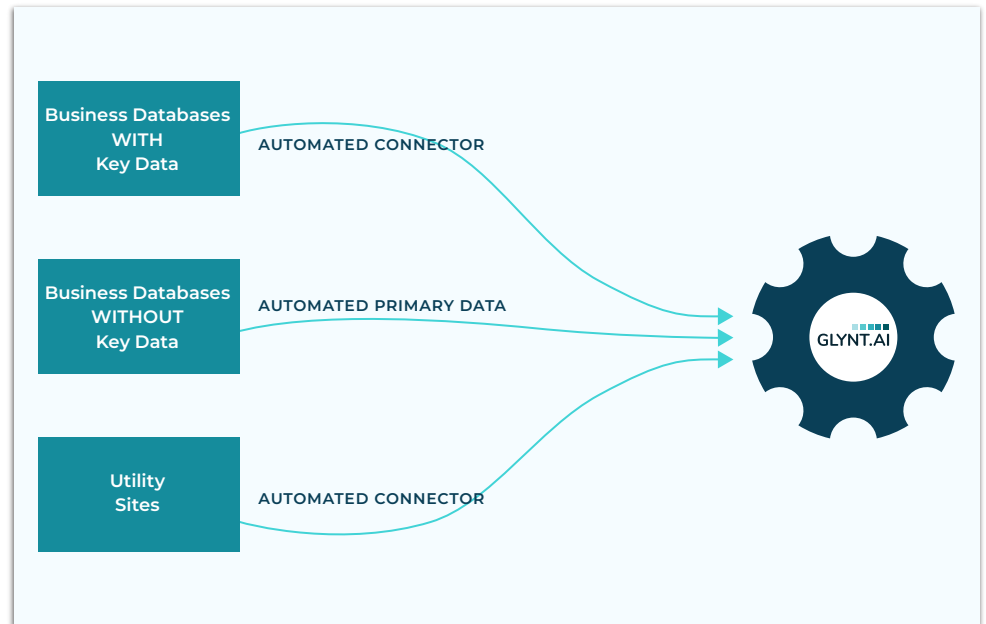

## Why Customers Use GLYNT

- ✔ **Works with your Carbon Accounting, ESG and Sustainability Software** – Reporting software relies on the customer (you!) to prepare the data. GLYNT provides automated data preparation with seamless data flows.
- ✔ **Get Actual and Complete Data** – Only GLYNT offers three ways to capture key sustainability input data (see back page). Get complete data that increases confidence.
- ✔ **All-in-One Solution** – From data capture in business systems, to reliable onboarding timelines, to global coverage and customized data enrichment and formatting, GLYNT is the single data solution for your reporting needs.
- ✔ **Including Scope 3** – While Scope 3 (supply chain) reporting is not yet required, it is on everyone's mind. See how the GLYNT system handles Scope 3 data and reporting [here](#).

## Get Complete Data with GLYNT

With reporting deadlines coming fast, everyone wants to prepare historical baselines and keep them fresh going forward. But it is tough to know where to start as key data is often scattered across siloed business systems.

Making the job even harder is the fact that key sustainability data is not in business databases, but in Primary Data sources (e.g. original PDFs, scans, xls files and more).
