Product Carbon Footprint

Audit-ready data for supply chain and
CBAM reporting

The Challenge

Many companies are struggling to develop their company-side baseline emissions while being asked to report their carbon emissions by product. The Product Carbon Footprint is widely requested by customers, and is also required reporting for EU importers.

The GLYNT Solution

GLYNT data services provide automated, accurate, consistent, granular and auditable sustainability data – water, waste energy and emissions – at the company, site and product level.

Our attention to detail and ability to capture the fine-grained data from the Primary Data sources delivers a great PCF result and a high PDS score. (PDS, the Primary Data Share, measures the share of reported emissions that comes from Primary Data as opposed to estimated data).

With years of experience, GLYNT offers first data within two weeks and a full year of sustainability data, including the PCF and PDS, within 90 days.

GLYNT makes it easy, as we are the single solution for all types of data formats, including IoT sensors, CSV files, APIs, PDFs and so on.
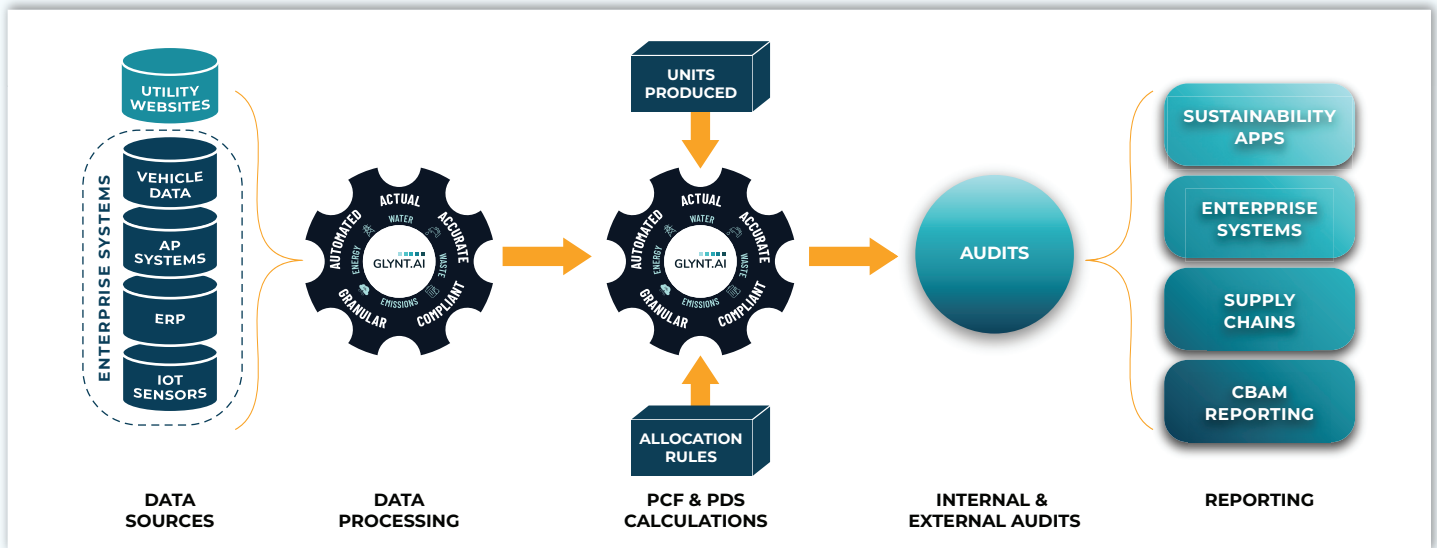

Key Considerations

As you set up your PCF data flows, you'll need to make some key decisions:

- **Cradle-to-grave or cradle-to-gate?** Do you want to include your downstream emissions, e.g. emissions from the use of your product and its end-of-life state? That's cradle-to-grave. Or stop your emissions calculations when the finished product leaves your control. That's cradle-to-gate.

- **Allocation of energy and materials?** Just as cost accounting needs some allocation rules for shared expenses, you will need some rules to allocate energy and materials usage.

- **Will supply chain emissions be included?** You may want to focus on just Scope 1 and Scope 2 in your first reporting. Many companies take this measured first step.

- **What about water and waste?** Plan on reporting these in the future at the product level, even if you bypass reporting of these commodities today.

GLYNT is a Complete Solution for PCF and PDS Reporting

Seamless data flows to your preferred systems and reporting frameworks

GLYNT.AI
The Sustainability Data Company

GLYNT is The Sustainability Data Company, producing investor-grade data for businesses around the world. Our audit-ready sustainability data enables accurate reporting, operational efficiencies and access to financial capital. With a purpose-built machine learning system, GLYNT is the automated solution for all types of water, waste, energy and emissions data. Speed work, lower costs, and power ESG, carbon accounting and other business systems with accurate, actual data from GLYNT. Learn more at glynt.ai
